EXAMINATION CONTENT GUIDELINE

EXAMINATION MODEL
The SCYM(ASCP) and SCYM(ASCPi) certification examination is composed of 100 questions given in a 2 hour 30 minute time frame. All exam questions are multiple-choice with one best answer. The certification exam is administered using the format of computer adaptive testing (CAT).

With CAT, when a person answers a question correctly, the next test question has a slightly higher level of difficulty. The difficulty level of the questions presented to the examinee continues to increase until a question is answered incorrectly. Then a slightly easier question is presented. In this way, the test is tailored to the individual’s ability level.

Each question in the test bank is calibrated for level of difficulty and is classified by content area. The content area aligns with the examination specific content outline. The examinee must answer enough questions correctly to achieve a measure above the pass point in order to successfully pass the certification examination. There is no set number of questions one must answer to pass, nor is there a set percentage one must achieve to pass. If at the end of the exam the examinee’s score is above the pass point, then he or she passes the exam.

EXAMINATION CONTENT AREAS
The SCYM exam questions encompass the following content areas within Cytometry: Instrumentation, Panel/Experiment Design, Applications, Data, and Laboratory Operations. Each of these content areas comprises a specific percentage of the overall 100-question exam. The content areas and percentages are described below:

<table>
<thead>
<tr>

**EXAMINATION CONTENT OUTLINE**

**IMPORTANT:** Examination questions, which are related to the subtest areas outlined below, may be both theoretical and procedural. Theoretical questions measure skills necessary to apply knowledge, calculate results, and correlate patient results to disease states. Procedural questions measure skills necessary to perform laboratory techniques, evaluate laboratory data, and follow quality assurance protocols.

I. **INSTRUMENTATION (15 – 20%)**
   A. Fluidics
      1. Hydrodynamic focusing and properties of sheath fluids
      2. Generation of differential pressures (e.g., syringe pump, pressure based)
   B. Optics
      1. Optical filters (e.g., long pass, band pass, short pass, dichroics, neutral density, polarizing)
      2. Light source (e.g., laser type, laser line, arc lamp, led)
      3. Lenses (e.g., beam shape, collecting, focusing, objective)
      4. Optical pathway (e.g., transmission, reflection, interrogation point, collinear, spatial separation, light scatter)
   C. Electronics
      1. Amplifiers (e.g., linear, logarithmic)
      2. Detectors (e.g., photomultiplier tube, photodiode, CCD camera, avalanche photon detector)
      3. Digital vs. analog systems
      4. Noise
      5. Pulse measurement (e.g., time delay, window extension, area, width, Coulter impedance)
      6. Threshold/discriminator

II. **PANEL/EXPERIMENT DESIGN (25 – 30%)**
   A. Sample
      1. Sample source (e.g., beads, blood, bone marrow, solid tissue, body fluids, subcellular components, cultured cells, microorganisms, plants, whole organisms)
      2. Sample integrity (e.g., collection, handling, storage viability)
      3. Sample preparation and staining (e.g., disaggregation, lysing agents, aggregates, filtering, fixation, permeabilization)
      4. Cell enrichment (e.g., cell sorting, density gradient isolation, magnetic beads)
   B. Assay Development
      1. Target (e.g., cell type, subcellular location, molecule)
      2. Sample state for functional studies (e.g., activated, resting, proliferating)
      3. Probe types (e.g., antibodies, viability/DNA dyes, physiological, tracking dyes, fluorescent proteins)
      4. Fluorochrome selection (e.g., antigen density, protein coexpression, optimal combination, photostability, F/P ratio, quenching, signal to noise)
      5. Spectral overlap and compensation
      6. Assay controls (e.g., fluorescence minus one (FMO), autofluorescence, biological systems control, background measurement controls)
      7. Assay optimization (e.g., appropriate use of limited sample, frequency of target, cell concentration, kinetics, scalability, blocking, statistical design)

III. **APPLICATIONS (25 – 30%)**
   A. Immunophenotyping (e.g., immunologic evaluations, hematologic disorders)
   B. Functional Assays (e.g., cytokines, chronic granulomatous disease, calcium flux, phospho flow)
   C. Multiplex Bead Assays (e.g., cytokines, proteins, chemokines)
   D. Solid Organ Transplant (e.g., HLA crossmatch)
   E. Stem Cell Analysis (e.g., CD34 absolute counts)
   F. Cell Cycle / DNA Ploidy
G. Rare Event Analysis (e.g., circulating tumor cells, minimal residual disease, circulating endothelial cells)
H. Microparticle Analysis
I. Fetal Hemoglobin Assay
J. Cell Sorting
K. Imaging Cytometry

IV. DATA (15 – 20%)
A. Data Standards (e.g., image file format, FCS format, listmode, MiFlowCyt checklist, storage requirements)
B. Signal Processing (e.g., binning, compensation, pulse processing, baseline restoration, background correction)
C. Data Display (e.g., types of displays, transformations)
D. Gating (e.g., hierarchical vs. Boolean gating, gates, regions)
E. Statistical Methods (e.g., central tendency, standard deviation, CV, KS statistics, cluster analysis, principal component analysis, discriminant analysis)
F. Common Data Modeling Techniques (e.g., cell cycle analysis, proliferation, phenotyping, ratiometric)
G. Quantitative Cytometry (e.g., molecules of equivalent soluble fluorochrome [MESF], absolute counts)

V. LABORATORY OPERATIONS (10 – 15%)
A. Quality Control
1. Instrument quality control (e.g., optical alignment, detector calibration)
2. Reagent quality control (e.g., panel verification, titration, lot to lot variation, storage, handling)
3. Sample integrity
4. Appropriate sample quality controls selection (internal, external)
5. Trend analysis and interpretation
B. Assay Validation
1. Method validation (e.g., accuracy, reproducibility/precision, sensitivity, specificity, linearity, reference range, robustness)
2. Method calibration (e.g., standards, controls)

C. Safety
1. Biosafety procedures (e.g., biosafety categories, Personal Protective Equipment, specimen transport and preparation precautions, aerosols, decontamination)
2. Instrument safety (e.g., lasers, electronics)
3. Chemical safety (e.g., mutagenic agents, cytotoxic agents)
4. Environmental safety (e.g., waste disposal)

D. Laboratory Administration
1. Financial (e.g., budgets, capital equipment acquisition, cost analysis, reimbursement, purchasing, inventory)
2. Operations (e.g., customer service, facility management, information technology)
3. Personnel (e.g., staffing and productivity, performance standards, training and evaluation)
4. Quality management (e.g., continuous quality improvement, risk management/medical-legal issues)

Examples provided (as indicated by e.g.) are not limited to those listed.

All Board of Certification examinations use conventional and SI units for results and reference intervals.

You will need to bring a non-programmable calculator with log function to the examination.

END OF CONTENT GUIDELINE
Specialist in Cytometry, SCYM
Credential Maintenance Program (CMP)

CMP Requirements
Total Number of Points Required: 36

Point Distribution:
- 1 point in laboratory or patient safety (i.e., quality control, quality assurance)
- 10 points in cytometry
- Remaining points in area(s) of lab specialty, management, education, or other related laboratory areas of interest

Credential Renewal Notification
Upon successful completion of the program, you will receive a three-year renewal notification for your credential.

Audit Provisions
To ensure the integrity of the Credential Maintenance Program, the ASCP Board of Certification will review and audit a percentage of declaration forms each year. If your declaration is selected for audit, you will be notified and requested to submit supporting documentation of the completed continuing education credits submitted.

CMP Application Fee
$95

CMP Reinstatement Fee
$125 (required fee for expired certifications in addition to the application fee).

Reduced Fee for Multiple Certifications
$15 (for multiple certifications with the same expiration date or within three months of each other, you must submit multiple declarations separately on the same business day to receive the reduced fee). Note: CMP fees are non-refundable.
